CLASSIFICATION DYSPLASIE HANCHES CI-DESSOUS

☐ A) Dysplasia free : Absence of abnormal signs, Norberg-angle Olsson > 105°	0	No sign of dysplasia : normal.
☐ B) Near normal hip joints : >= 105° but slightly incongruent or good congruence but angle < 105°	SL	Limit stade : Almost normal.
☐ C) Mild dysplasia : stade 1. Angle about 100°. Incongruence femur head/acetabulum (slight flattening of the craniolateral acetabular rim. Slight arthrosis may be possible.	DC1	Acceptable : slight arthrosis, osteophytes smaller than 2 mm.
☐ D) Moderate dysplasia : – stade 2. Obvious bad congruence femur head-acetabulum with subluxation. Angle > 90°. Flattening of the craniolateral rim and/or Osteoarthrotic signs are present.	DC2	Moderate dysplasia : moderate arthrosis, osteophytes from 2 to 5 mm.
☐ E) Severe dysplasia : stade 3. Angle < 90°. Luxation or subluxation ou luxation. Obvious flattening of the cranial acetabular edge, deformation of the femoral head ,mushroom shaped, flattening or signs of osteoarthrosis are noted.	DC3	Severe dysplasia : severe arthrosis and osteophytes over 5 mm.

HD : The number **1** ou **2** after the letter indicate that the score in nearer the previous or next letter score.

OBSERVATIONS :

1. Please send this report to the owner to the email address under owner information, including x-rays and the radiologist's official certificate of radiological examination.

2. At the club at info@nebkc.com with ALL annexes. Please include the dog's name in the "SUBJECT" of the email.

X-Rays date:	Score date :	Signature of the veterinarian & stamp :
Location : Route Caen, 14150 Ouistreham, FRANCE
